Industry start date: 1981
Malcolm Smith
Pipeline Engineer, St Fergus

“Working in the gas industry is a bit of a tradition in my family. My great-grandfather was the manager of the gasworks in Peterhead and retired at the age of 70 after 50 years of service. I joined Scottish Gas after leaving school and completed a three-year apprenticeship as a distribution craftsman. Today I am a pipeline engineer covering the operations here at St Fergus and half the transmission network of Scotland. My daughter Stacey has followed in my footsteps and works as an instrument technician at the terminal. I encouraged her, but I didn’t pull any strings. She made it on her own and I’m very proud of her.”

Industry start date: 2006
Stacey Smith
Instrument Technician, St Fergus

“Although my father and I both work at St Fergus, we don’t actually work side by side because he is in operations and I am on maintenance. But we often bump into each other in corridors or around the site during the course of the day. I still live at home and in the evenings we try to avoid talking about work, but we often find ourselves catching up on the office gossip. When I left school, he said I should apply for a job in the gas industry, saying I would have an interesting and challenging career, and he was right. I really enjoy my work and I can see myself one day encouraging my children to consider a career in gas.”
